PROFILE SUMMARY

Full-stack developer pursuing an M.Sc. in Web Engineering at TU Chemnitz, working daily across TypeScript, React, and Next.js, deployed on Vercel. Built and shipped three full-stack applications end to end, not university exercises that stayed on localhost, with RESTful API design and PostgreSQL at the core of each. Writes maintainable, self-describing, testable code and takes ownership of features end to end. New to NestJS specifically, but it builds directly on Node.js and Express, which I already use daily, so I expect the transition to be quick. Uses Claude Code daily as part of a real development workflow, reviewing everything it produces before shipping it. Genuinely drawn to work with real-world climate impact. Fluent in English. Based in Chemnitz, available remote (Germany-wide), 20 hours/week.

EDUCATION

Technische Universität Chemnitz

Master of Science – Web Engineering

Chemnitz, Germany

Oct 2025 – Present

- Relevant Modules: XML & Web Services, Advanced Data Management (NoSQL, Data Warehousing), Software Service Engineering (REST, SOA), Media Retrieval

Government City College, Osmania University

Bachelor of Science – Computer Science | Grade: 8.85/10.0

Hyderabad, India

Jul 2021 – May 2024

- Focus: Data Structures, Database Management Systems, Web Technologies

TECHNICAL SKILLS

Core: TypeScript, React.js, Next.js, JavaScript (ES6+), Node.js

Frontend: Responsive Design, component-based architecture, Vercel deployment

Backend & Database: REST API design, JWT authentication, PostgreSQL, Prisma ORM

Engineering Practice: Git & GitHub (PR workflows), debugging across the stack, data structures & algorithms, testable and maintainable code

AI-Assisted Development: Daily use of Claude Code with critical review of every suggestion before shipping it

Currently Learning: NestJS, Google Cloud Platform, Terraform

PROJECTS

Job Application Tracker

TypeScript, Next.js, Node.js, PostgreSQL, Prisma, JWT, Zod

[Live Demo](#) | [GitHub](#)

- Built a full-stack application entirely in TypeScript with type-safe API routes throughout, JWT authentication, middleware-level route protection, and a 7-state status workflow with automated status-history tracking. Actively used it to track 15+ of my own job applications, not a coursework exercise
- Implemented a responsive real-time analytics dashboard with Zod validation; diagnosed and fixed a production PostgreSQL connectivity failure on Vercel Edge Runtime by migrating to a Prisma driver-adapter pattern

MockMentor

React, Next.js, Node.js, PostgreSQL, Prisma, JWT, SWR, Zod

[Live Demo](#) | [GitHub](#)

- Developed a full-stack interview booking platform with role-based access for three user types and JWT authentication with HTTP-only cookies across 20+ REST API routes with centralized error handling
- Designed a real-time availability and slot-conflict detection algorithm preventing concurrent double-bookings, with rate limiting and input validation for production reliability

Open Data Road Accidents Platform

Node.js, Express, PostgreSQL, ETL, REST APIs

[GitHub](#)

- Built an ETL pipeline transforming German open road-accident datasets into a structured PostgreSQL database, with a REST API and dashboard for querying, filtering, and visualizing the data

LANGUAGES

English: Fluent – B2 Professional Working Proficiency
Telugu, Hindi

German: A2 certified – enrolled in B1 course

Native:
